

STUDENT RESPONSE SYSTEM

ActivEngage2 sets the standard in assessment software for tablets, smartphones, mobile devices and traditional computers. It is ideally suited for schools and districts considering or implementing tablet, 1:1 computing and BYOD (Bring Your Own Device) initiatives.

ActivEngage2 leverages existing investments in technology by transforming existing computers and mobile devices into student response systems. ActivEngage2 works in conjunction with interactive whiteboards and projectors, and even works in environments where no interactive whiteboard or projector is used.

DOWNLOAD

Software Download

The server and client software are available to download on Promethean Planet at www.prometheanplanet.com/activengeage2. The native client is also available from the Apple, Windows and Amazon App Stores and Google Play Store.
